HERE Technologies

RE: SALES SOLUTIONS ARCHITECT, STRATEGIC ACCOUNTS

Dear Hiring Team,

I'm excited to apply for the Sales Solutions Architect role on the Strategic Accounts team. I hold a BA in Geography with a concentration in GIS, and I've spent my career since then doing the exact job this role describes — sitting between enterprise customers and internal engineering, product, and sales teams, turning ambiguous requirements into working technical solutions. **Getting to do that work at a company whose platform is built on the same location data and spatial thinking my degree is in feels like a genuinely good fit, not just a resume match.**

As a Senior Technical Consultant at Lytics, I led a multi-stakeholder enterprise engagement for one of our largest accounts — tens of millions of records — using BigQuery, Python, and APIs to validate data and translate business requirements into a system that engineering and business stakeholders could both act on. That included the discovery work, the architecture decisions, and the documentation to hand it off cleanly, which is the same arc this role runs on customer engagements.

My geospatial background adds a dimension I think is directly relevant to HERE specifically. At Teren, I worked with machine-learning models built from drone and satellite imagery to assess environmental risk on land, partnering daily across engineering, product, and sales for institutional customers — evaluating tradeoffs, validating technical approaches, and communicating findings to audiences ranging from field staff to executives. At the National Park Service, I built geospatial tools for non-GIS park staff, which meant constantly translating technical spatial data into something a non-technical field user could actually use. I also spent time earlier in my career doing disaster-response mapping with the Humanitarian OpenStreetMap Team, so location data as a tool for real-world decisions has been a through-line for me long before it was a job requirement.

I bring the cross-functional and customer-facing instincts this role calls for as well. As a Solutions Engineering Manager at Homebot, I hired and managed a technical team while translating findings for non-technical stakeholders. At Zayo, I owned the Salesforce CRM stack end-to-end, working directly with APIs and integrations. In each case, I was the person building trust with a customer through curiosity and honest tradeoffs rather than a canned pitch — asking the next question instead of assuming I already had the answer.

I'd welcome the opportunity to bring that combination of GIS foundation, technical consulting experience, and genuine comfort with ambiguity to HERE's strategic accounts, and to talk more about how I could help your largest customers get real value out of the platform.

Thank you for considering my application. I'd love the opportunity to talk.

Warmly,

Katrina Engelsted
