

Katrina Engelsted

CLIMATE & ENVIRONMENTAL TECHNOLOGY | PROGRAM & CROSS-FUNCTIONAL OPERATIONS

Boulder, CO · open to the Basalt, CO office · katrina@engelsted.co · 774.239.8699 · linkedin.com/in/katrinae

CORE EXPERTISE

Climate & Environmental Policy

- Environmental regulation
- Climate adaptation
- Federal science infrastructure
- Public lands
- Oil & gas regulation
- Environmental compliance
- Geospatial risk

Research & Decision Support

- Technical research & synthesis
- Landscape analysis
- Data interpretation
- Briefing materials
- Strategic communications
- Spatial analysis

Program & Stakeholder Mgmt

- Cross-functional coordination
- Multi-stakeholder engagement
- Coalition & partner comms
- Project management
- Convening & event logistics

Systems & Technology

- Salesforce CRM
- Knowledge management
- Google Workspace
- Workflow automation
- AI agents
- RAG pipelines
- Geospatial technology

EDUCATION

MBA

Quantic School of Business and Technology
2021

BA, Geography (GIS), Honors

Colgate University 2011
Honors thesis: spatial-statistics study using kriging, IDW, and local Moran's I.

SUMMARY

Climate and environmental technology generalist with experience spanning federal science infrastructure, environmental regulation, geospatial risk, climate adaptation, and decision-support. Three years inside the **National Park Service's** science and mapping infrastructure, followed by work at **Teren** developing geospatial and machine-learning tools for environmental compliance and oil & gas infrastructure. Currently advise an early-stage water-technology startup focused on subnational climate adaptation. Experienced translating technical research and data into decisions, coordinating across technical and non-technical stakeholders, and building the systems, documentation, and workflows that keep complex work moving.

PROFESSIONAL EXPERIENCE

- **Founding Technical Advisor** — *Upstream AI* 2026 – Present

Advise an early-stage climate-technology startup developing software for small drinking-water and wastewater utilities, with a focus on subnational climate adaptation and infrastructure decision-support.

- Advise on **product strategy** and translate water-utility operational needs into practical technology and data workflows
 - Build **AI-agent workflows**, including Claude Code sub-agents and RAG pipelines, to reduce manual work and improve access to technical knowledge
 - Work directly with utility operators and technical stakeholders to understand regulatory, procurement, and operational constraints
- **Senior Technical Consultant** — *Lytics* 2022 – 2023

Led a multi-stakeholder enterprise engagement involving tens of millions of records, translating a complex data problem into a usable decision-support system.

- Coordinated across engineering, business, and client stakeholders to define requirements, resolve data issues, and communicate technical findings
 - Synthesized complex data and technical information into recommendations and documentation for non-technical decision-makers
 - Built and documented repeatable **customer-delivery processes** and quality-control workflows
- **Marketing Automation Manager** — *Zayo Group* 2022

Owned Salesforce CRM operations and data-driven marketing systems.

- Administered **Salesforce CRM**, Einstein, Marketing Cloud, reporting, data hygiene, and workflow automation
 - Built reporting and automation that contributed to a **15% increase in conversion**
 - Managed data integrity and translated business requirements into scalable systems and processes
- **Head of Marketing Technology** — *Teren (formerly SolSpec)* 2018 – 2021

Worked at the intersection of geospatial technology, environmental regulation, and risk assessment for oil & gas infrastructure and land near national park boundaries.

- Supported **machine-learning models** using drone and satellite imagery to assess environmental risk, including surface hydrology, habitat encroachment, and invasive species
 - Worked on ambiguous and contested federal land and national park boundary conditions with regulatory and conservation implications
 - Partnered across engineering, product, and sales to translate technical environmental analysis into usable information for institutional and government-adjacent customers
 - Helped communicate complex geospatial and environmental findings to stakeholders without technical backgrounds
- **Solutions Engineering Manager** — *Homebot* 2015 – 2018

- Hired, managed, and trained a technical team in an early-stage technology company
 - Translated customer research and technical findings into product and business recommendations for non-technical stakeholders
 - Coordinated across product, engineering, and customer-facing teams in a rapidly changing environment
- **Frontend Developer, Digital Maps Team** — *National Park Service* 2012 – 2015

Worked inside the National Park Service's federal science and mapping infrastructure, building tools used by park staff and the public.

- Built **wildfire-perimeter and endangered-species mapping tools** designed for non-GIS park staff
 - Translated scientific and geospatial data into accessible decision-support tools
 - Contributed cartographic work that became **NPS Park Tiles**, the official basemap for park websites
- **Early Career** — **Conservation & Humanitarian Organizations**

Humanitarian OpenStreetMap Team · Cadasta · Bonobo Conservation Initiative

- Humanitarian OpenStreetMap Team** — QGIS-based disaster-response mapping
 - Cadasta** — documentation and geospatial work supporting land and resource rights
 - Bonobo Conservation Initiative** — wildlife conservation
