Google gTech Hiring Team

Google — gTech Users and Products (gUP)

RE: CHROME CONSUMER PRODUCT SUPPORT MANAGER

Dear Hiring Team,

I'm excited to apply for the Chrome Consumer Product Support Manager role on the gUP team. The idea of being the "ultimate user advocate" — listening for the friction points in a product used by billions of people, and turning that signal into support strategy before it becomes a crisis — is exactly the kind of work I've built my career around, just usually at a smaller scale.

As a Senior Technical Consultant at Lytics, I led an end-to-end enterprise engagement for Whirlpool involving tens of millions of records. I ran discovery across customer, business, and engineering stakeholders, used BigQuery, Python, and APIs to validate data and troubleshoot issues, and translated what I found into a working model and implementation recommendations that both technical and non-technical teams could act on. That same instinct — take a messy signal, figure out what's actually going on, and turn it into a plan — is what I understand this role to be built around, just applied to Chrome's support strategy instead of a single enterprise account.

I also bring direct experience in the operations and process-improvement work this role calls for. At Zayo, I owned the Salesforce technology stack end-to-end, optimizing workflows and building reporting and automation that lifted conversion 15%. At Teren, I supported technical evaluations and customer-facing solution development for institutional customers, partnering across Engineering, Product, and Sales to troubleshoot issues and communicate tradeoffs. And as a Solutions Engineering Manager at Homebot, I led a customer-facing technical team, translating customer requirements and technical findings into clear recommendations for non-technical stakeholders — the same translation loop between user experience and product/engineering decisions that this role sits in.

I hold an MBA and a BA in Geography with a GIS concentration, and across every role since, I've been the person who builds the relationships and reporting that keep cross-functional launches from falling apart at the seams. I'd bring that same combination of data-informed judgment, operations discipline, and genuine care about the end user's experience to Chrome's support strategy.

I'd welcome the opportunity to talk about how my background could help gUP anticipate friction points and shape a more seamless experience for Chrome's users.

Thank you for considering my application. I'd love the opportunity to talk.

Warmly,

Katrina Engelsted
