

Solutions engineer who specialized into customer-data infrastructure. Fifteen years across enterprise systems, data platforms, and team leadership. The work Trimble is hiring this seat to do — **match & merge, survivorship, deterministic + probabilistic resolution, cross-reference, hierarchy management, stewardship workflows** — is work I've shipped, just inside a CDP (Lytics, Whirlpool) rather than a named MDM platform. **The primitives are the same.** Solutions Engineering Mgr at Homebot, Head of MarTech at Teren, founding technical advisor at an AI-native startup now. Boulder; 25 minutes from your Westminster office.

01 THE FIT — JD LINE BY LINE

Core MDM primitives: match/merge (deterministic + probabilistic), survivorship, cross-ref, hierarchy management, stewardship	► STRONG Whirlpool/Lytics: tiered-confidence resolution at scale. Field-by-field survivorship. Source-system IDs mapped to canonical graph identity. Household → person → account → device hierarchies. Stewardship as the deliverable, not afterthought. Same primitives stack the JD asks for.
API-first + event-driven integration (CDC, streaming, pub/sub) — upstream (CRM, ERP) + downstream (warehouse, IAM)	► STRONG Production APIs against Anthropic, OpenAI, Voyage, Supabase, Stripe, Postgres at Upstream. Event/CDC patterns from Lytics streams + Teren attribution. CRM/warehouse integration is standard practice from CDP delivery.
Translate governance-approved standards → platform rules	► STRONG The literal job at Lytics: take client data-policy decisions and instantiate them as platform rules. Same partnership I'd have with TDMO — they define, I implement.
Lead and grow cross-functional team (architects + platform/data engineers), agile delivery, vendor management	► MATCH Solutions Engineering Manager at Homebot (early team). Cross-functional lead at Teren as Head of Marketing Tech. Founding-team coordination at Upstream. Managed Lytics implementation partners on the Whirlpool engagement.
Snowflake (bonus) · AI-assisted matching / advanced entity resolution (bonus)	► STRONG One Snowflake project (Eagle River AML assessment, R + Snowflake). AI/Claude Code + embeddings = my current day-job at Upstream — would actively look for places to apply LLM-assisted matching to the MDM problem.
Hands-on with named MDM platform (Informatica, Reltio, Semarchy, SAP MDG)	► HONEST GAP Haven't operated a named MDM platform. Practiced all the underlying primitives in a structurally-identical CDP context. Vendor ramp = real but bounded (config changes month 1, platform decisions month 3).

02 SHIP LOG — THE WORK THAT MAPS TO THIS ROLE

2022 — 23 · LYTICS · SR. TECHNICAL CONSULTANT · ENTERPRISE CDP

Whirlpool customer identity engagement · *graph identity model at scale*
Led the Whirlpool engagement: translated their relational SQL stack (transactions, products, customers, devices, web events) into a **graph identity model**. Tiered-confidence resolution across tens of millions of records. Full primitives stack — match/merge (deterministic + probabilistic), survivorship rules, cross-reference, hierarchy management (household → person → account → device), stewardship workflow. **The closest analog I've shipped to what Trimble is hiring for.**

2015 — 18 · HOMEBOT · SOLUTIONS ENGINEERING MGR

Early-team PropTech · *data schema + lifecycle platform*
Designed data schema for messy real-estate ingestion across multiple upstream MLS sources. Shipped the lifecycle email product for agents + lenders. **People management + platform delivery from day one.**

2024 → NOW · UPSTREAM AI · FOUNDING TECH ADVISOR

AI-native platform · *Claude Code, RAG, embeddings*
Built sub-agent stack, prompt libraries, RAG pipelines. Embedding-based similarity is a daily tool. **AI-assisted matching = current day-job.** Part-time, structured to step back to advisory for the right full-time seat.

2018 — 21 · TEREN · HEAD OF MARKETING TECHNOLOGY

Seed-stage geospatial · *full stack ownership*

3 yrs at a geospatial-intelligence startup. Web tech, attribution, persona-driven funnels. **4x MQLs MoM**. Cross-functional across eng, product, sales every day.

2012 — 15 · NATIONAL PARK SERVICE · FRONTEND / GIS

NPS *Park Tiles* team · custom park mapping

On the team that built NPS Park Tiles. Custom mapping projects for individual parks: wildfire perimeters, endangered-species habitat, visitor-management decision support.

EARLIER · ZAYO (MKTG AUTO MGR, +30% CLOSED-WON, 2022) · SPRINGBOARD ML/DS CAPSTONE (R + SNOWFLAKE AMI ASSESSMENT, 2026)

Process flows · automation · enterprise data analysis

Zayo: built lead-scoring flows + dashboards from a blank Salesforce. **Springboard:** end-to-end AMI Program Implementation Assessment on hourly interval data — R + Snowflake stack.

03 TOOLKIT

Core to the role

Honest ramp

Working knowledge

Graph identity modeling · match/merge · survivorship

Cross-ref · hierarchy · stewardship

API-first · REST · GraphQL · webhooks

CDC · event streaming · pub/sub

Salesforce · HubSpot · Marketo · Lytics CDP

Snowflake · Postgres · BigQuery · Supabase

Python · SQL · R · TypeScript

Claude Code · OpenAI · Voyage · RAG

Git · CI/CD · Notion · Linear

Informatica · Reltio · Semarchy · SAP MDG

04 RECEIPTS — WHY THIS IS A REAL FIT

- ♦ **The primitives, done before.** Whirlpool/Lytics — tiered-confidence identity resolution, survivorship, cross-reference, hierarchy, stewardship at enterprise scale. **Same shape as the work Trimble is hiring this seat to do.**
- ♦ **People + platform leadership.** Solutions Engineering Mgr at Homebot (early team). Head of MarTech at Teren. Founding-team coordination at Upstream. Comfortable hiring, structuring, and leading cross-functional technical teams.
- ♦ **AI by current day-job.** Founding tech advisor at Upstream — Claude Code sub-agents, RAG pipelines, embedding similarity. The AI-assisted matching bonus in the JD is work I'm already doing.
- ♦ **Honest about the vendor gap.** Informatica / Reltio / Semarchy / SAP MDG — I've read documentation, not operated them in production. Underlying skill set is tool-independent; vendor ramp real but bounded.

05 EDUCATION

BA, GIS · *Honors*

COLGATE · 2011

Honors thesis in spatial statistics — early systems-thinking foundation.

Machine Learning / Data Science

SPRINGBOARD · 2024

Python-first curriculum. Capstone: end-to-end Snowflake + R pipeline.

MBA · *Galvanize Full-Stack*

QUANTIC · 2021 · GALVANIZE · 2014

Strategy + finance + ops. Plus the engineering bootcamp that powers the "ships code" claim.
