HERE Technologies Hiring Team
HERE Technologies

RE: SALES SOLUTIONS ARCHITECT, STRATEGIC ACCOUNTS

Dear Hiring Team,

I'm excited to apply for the Sales Solutions Architect role on HERE's Strategic Accounts team. I've spent my career in the space between customers and technology teams—understanding what someone is actually trying to accomplish, figuring out what the data and systems can support, and translating that into a solution that people can build, use, and trust. **With a BA in Geography (GIS), enterprise technical consulting experience, and a background in location technology, HERE feels like an especially natural fit.**

As a Senior Technical Consultant at Lytics, I led an end-to-end enterprise engagement for Whirlpool involving tens of millions of records. I worked across business, technical, and customer stakeholders to understand requirements, used BigQuery, Python, and APIs to validate data and troubleshoot issues, and translated those findings into a working identity model and implementation recommendations. I also documented the architecture, assumptions, workflows, and technical decisions so the solution could be handed off and reused. That experience taught me how to navigate the ambiguity that comes with complex enterprise environments: balancing what the customer wants with what the technology can actually support, identifying problems early, and communicating tradeoffs clearly.

My geospatial background is what makes HERE particularly compelling to me. At Teren, I worked within a geospatial-risk company using machine-learning models built from drone and satellite imagery to assess environmental and infrastructure risk. I partnered across Engineering, Product, Sales, and institutional customers throughout technical evaluations, helping translate complex geospatial analysis into decision-ready information and working through technical questions and tradeoffs along the way. Earlier, at the National Park Service, I built mapping applications for non-GIS field staff, turning complex spatial data and workflows into tools that people could actually use. My career started even earlier with disaster-response mapping through the Humanitarian OpenStreetMap Team. Location technology has been a through-line for me—not simply an area of technical knowledge, but a way of solving real-world problems.

I've also developed the customer-facing and cross-functional instincts that I believe are essential in a strategic-account role. At Homebot, I led a Solutions Engineering team and worked across Product, Engineering, and customer-facing teams to move technical solutions forward. At Zayo, I owned the Salesforce technology stack, including APIs, integrations, data workflows, and automation. Across these roles, I've learned that strong technical customer relationships are built through curiosity and credibility: asking the next question, understanding the underlying business problem, being honest about constraints, and working collaboratively toward the right solution rather than forcing a predetermined one.

What excites me about this opportunity is the chance to bring that combination of enterprise technical consulting, customer discovery, data and APIs, and genuine location-technology expertise to a company whose products have such broad real-world applications. I'd be excited to work alongside HERE's Account Executives, Product, Engineering, Professional Services, and Customer Success teams to help strategic customers turn complex problems into solutions that create measurable value.

Thank you for considering my application. I'd welcome the opportunity to talk about how my background could contribute to HERE's Strategic Accounts team.

Best,

Katrina Engelsted
